DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-9, drawn to method, classified in class 438, subclass 623.

II. Claims 10-19, 20-29, 30 and 31, drawn to device, classified in class 257, subclass 620.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product (device wafer of the device claims) can be made without forming resin layer on semiconductor substrate. The wafer itself can be made by the Czochralski technique. A semiconductor device is often manufactured by applying a predetermined formation process to the semiconductor substrate in this state. According to degree of characteristics required for the device, a semiconductor device may be manufactured using a substrate obtained by stacking epitaxially grown layers.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Att. Schivley on 5/23/05 to request an oral election to the above restriction requirement, but did not result in an election being made. On 5/24/05, Att. Schivley requested the restriction requirement be provided in written form.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
